

HARMONY™ FLORAL

“Sur lies” white and rosé wines: freshness, cleanliness, and structure

CHARACTERISTICS

Harmony Floral is a yeast derivative, rich in molecules with reducing activity, specifically designed for white and rosé wine ageing. It lets you take advantage of all the benefits of *sur lie* ageing without the risks associated with fermentation lees. The yeast derivative combines the properties of tannin from exotic species.

APPLICATIONS

Harmony Floral, thanks to the release of yeast polysaccharides, enriches the structure and complexity of white wines. The synergy between the yeast derivative and tannin improves the structure of the wines, in particular with regard to their taste harmony and balance. The antioxidant peptides and the phenolic fraction protect against oxidative phenomena and remove slight hints of reduction, guaranteeing fresh, clean aromas.

Used with Velvet F tablets, in addition to a greater structure, it helps to increase the fruity notes and clean aromas. The same combination significantly reduces the herbaceous notes.

DOSAGE and INSTRUCTIONS FOR USE

10-50 g/hl.

Dissolve the product directly in the wine and keep in contact at least two weeks with periodic bâtonnage.

PACKAGING

2 kg bags
