

NUTRIGREEN

Yeast nutrient based on purified organic yeast cell walls

NUTRIGREEN

Organic certified products for organic wines production, Reg. 203/12.

Applications

Nutrigreen is a complete supplement that can be used or at the beginning or at 1/3 of the fermentation, particularly when it is necessary to use one product to satisfy all of the yeast needs. The nitrogen supplied allows for normal yeast metabolism; the cell walls and Polimersei type fibres guarantee medium detoxification and normal fermentation kinetics; the lipid fraction liberated by the cell wall help the yeast to adapt to the increasing alcohol content. **Nutrigreen** does not contain ammonium sulphate, and therefore is particularly indicated when working in reductive conditions or in musts that easily develop reductive notes.

Method of Use

Completely disperse the product in a small amount of water, must or wine and add it to the volume to be treated.

Dosage

For fermentation and refermentation: 20-60 g/hl.

Packaging

1 kg bags.

Storage

Store sealed containers in a dry, clean area.
