

## LIQUISOL 15K

*Potassium bisulphite solution*

### CHARACTERISTICS

---

**Liquisol 15K** is a colourless or light yellow solution of potassium bisulphite with SO<sub>2</sub> content of 140-160 g/l.

### APPLICATIONS

---

The liquid form of Liquisol 15K allows it to be easily solubilised and homogenised in the mass, and avoiding the spread of dust in the environment is less troublesome for the operator.

Liquisol 15K, like conventional metabisulphite, provides potassium ions. Apply the usual procedures to avoid tartaric instability.

### DOSES and INSTRUCTIONS FOR USE

---

As needed, considering that: 10 ml/hl provide 1.5 g/hl of SO<sub>2</sub>.

The product is used as it is.

### PACKAGES

---

25 kg jerrycans.
