

# TOP-TAN SB

*Grape skin tannin for use during the aging of white and rosé wines*

## CHARACTERISTICS

Top-Tan SB is a condensed tannin extracted from white grape skins, which is used during the aging of white and rosé wines.

## APPLICATIONS

Top-Tan SB provides structure and stability; the treated wines have more body, mouthfeel and persistence. The affinity between this grape tannin and the wine polyphenols allows it to integrate perfectly and offer a great final balance. The nose is more complex and fresh.

Top-Tan SB also promotes better colour and aroma stability and consequently improved longevity of the wine's sensory qualities.

Very interesting results in terms of complexity and balance can be obtained by using Top-Tan SB together with aging on lees, for example with Harmony Full or Harmony Vitality.

## DOSAGE

During aging: 2-10 g/hL.

## PACKAGING and STORAGE

500 g jars.

Store the product in its original packing, in dry and cool conditions.
