

# ENOPERLITE™ line

## Perlite for filtration

### APPLICATIONS

The **Enoperlite** range has been set up to satisfy the need of vacuum drum filtration as well as an alternative to diatomaceous earth in pre-coat filtration. The range cover all the porosity need from very coarse to very fine grade.

Very interesting feature of perlite is the safeness and healthiness for the working environments due to the absence of crystalline silica.

### DOSAGE

0,5-2 g/l as body-feed; 1-1,5 kg/m<sup>2</sup> on vacuum drum filters.

### PACKAGING

14, 16, 18, 25 kg according to the type.

TYPE	APPLICATION
Enoperlite 1 flux	vacuum drum filters, body feed filters, very coarse filtration
Enoperlite 1 extra	vacuum drum filters, body feed filters, coarse filtration
Enoperlite 3 extra	vacuum drum filters body feed filters, slightly fine filtration
Enoperlite 7 extra	body feed filters, fine filtration
Enoperlite 10 extra	body feed filters, very fine filtration
Enoperlite S	body feed filters, final filtration (pre-sterilising)

Olive and other vegetable oil

Grape juice, other fruit juices, infusions

Wine, beer, spirits
