

Solfobenton™

Solfobenton™ is a special compound made of **activated bentonite** mixed with **sulfite salts**. When in contact with the humidity it gets free the SO_2 , very strong disinfectant substance.

Besides, it controls the moisture of the grapes with its strong water absorption.

Solfobenton™ is so precious and safe that the treatments on the grapes just harvested are recommended to heal the cracks caused by the *hail* and the *microwounds* caused by biological attacks.

USE AND DOSE

Solfobenton™ is distributed as dry powder: dose 100-150 g/100 kg of harvested grapes.

The treatment is recommended

- to dry the grapes.
- to inactivate oxidative enzymes (laccase and tyrosinase).
- to prevent the proliferation of undesirable microorganisms.

COMPOSITION

Active Bentonite min. 70%,
sulfites salts.

PACKING

20 kg bag

Used before pressing, it provides the beneficial effects of SO_2 so avoiding to add the sulphur dioxide in the early stages of winemaking.
